

ArcMentor 4.0 Product Data Sheet

ArcMentor for **Public** Instant Messenger

Key Features and Benefits

► Compliance

ArcMentor provides all the necessary tools to comply with Sarbanes Oxley, SEC, NASD, NYSE, FERC, HIPPA and Graham-Leech-Bliley, Cal SB 1386.

► Archive and Monitor the content of all your IM communication

Captures all IM Communications between IM Users for IM's like
• AOL • MSN • Yahoo • ICQ

► Archive transferred files

Captures file information, being transferred between IM Users.

► Real-time IM Audit

Administrators or authorized users can view real-time IM Sessions.

► Retrieve all communication

All archived sessions can be retrieved to provide proof of communications and to audit conversations.

► Analyze and Track Trends

Web based controls allow easy but secure access for administrators to view global usage reports, user specific reports, scan or monitor content.

► Report and Manage

Capture business intelligence and have full control over the communication networks.

► Clustering

IM Communications is logged simultaneously on two different servers for increased reliability.

► Archive Backup / Restore

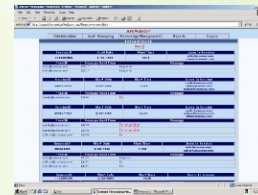

Old IM communication data can be archive based on Archive data age or Archive data size and stored on the local drive and later restored as and when required. The archive data can be exported to another system.

As more and more businesses indicate that IM sessions are treated with the same importance as email communications, they must find a method of maintaining the same record retention, auditing and other functionality as with email.

ArcMentor Public IM archiving system is solution for detecting, monitoring and analyzing Instant Messaging (IM) on corporate networks. It ensures archiving of all Public instant Messaging content onto the data store by "Passively" sniffing onto the Internet traffic moving to and fro from Corporate LAN. This content is then stored securely on the server side where only authorized individuals are able to access the accumulated data.

As the archiving system operates without being IN-LINE to network infrastructure there will be no network performance degradation.

ArcMentor is just one application in our suite of products that are available for integration with the technology you use today. Our products integrate with existing enterprise information technology with no configuration changes of end-user machines or disruptions to current IM usage. It manages the structure and flow of real-time communication among individuals, groups, and applications. By wrapping real time communications around the technology that runs your business, you can respond in real time to time-critical events, giving your enterprise the critical advantages of speedy decision-making, saving time and money.

System
Requirement

Pentium IV , 512 MB RAM,
Linux- Mandrake 9.2 or RedHat 7.2X
Java, Apache Tomcat, My SQL
